

Extending Microsoft MOM and SMS to manage every system and device in your heterogeneous data centre.

MOM Connectors

Using Microsoft Operations Manager (MOM) to manage your enterprise is smooth sailing and clear skies! eXc Software understands there are situations where you are required to support multiple enterprise systems management tools. No problem. eXc Software WMI Event Providers combined with MOM provide a single enterprise systems management tool to manage your heterogeneous computer environment. eXc Software connector framework tightly integrates any enterprise management product with MOM and supports both unidirectional and bidirectional data flows. eXc Software connector is currently the only connector solution utilizing Microsoft Scripting languages to eliminate reliance on any vendor to customize the connector.

The eXc Software connector framework uses a component architecture approach to combine the power of the following tools and frameworks:

- Microsoft MOM Connector Framework (MCF) via web services
- eXc Software WMI Event Provider for non-Windows
- eXc Software SNMP Solution

To tie MOM together with other enterprise management system(s) without draining your budget, contact your local eXc reseller.
