

Extending Microsoft MOM and SMS to manage every system and device in your heterogeneous data centre.

## MOM MP for MVS

Using Microsoft Operations Manager (MOM) to manage your enterprise is smooth sailing and clear skies! Why stop with your Windows servers though? Imagine having a single tool and screen to see what is happening on all of your enterprise computer systems...at a cost that won't drain your budget. eXc Software provides MOM solutions for non-Windows systems including the IBM MVS (z/OS).

The eXc Software MVS MOM Management Pack (MP) monitors and automates MVS operations. The MOM MP for IBM MVS can:

- View all critical MVS messages (highlighted and WTORs) in MOM
- Tailor message monitoring to suit specific needs (i.e. get low lighted messages)
- Automatically reply to any message (reducing human intervention and error)
- Issue MVS commands based on any criteria (increasing processing efficiency)
- Generate detailed reports showing all activity on LPARs for post-analysis purposes
- And much more

If you are considering utilizing the complete power of MOM by monitoring your MVS systems, contact your local eXc reseller.
