

Extending Microsoft MOM and SMS to manage every system and device in your heterogeneous data centre.

MOM MP for Non-Windows

Using Microsoft Operations Manager (MOM) to manage your enterprise is smooth sailing and clear skies! Why stop with your Windows servers though? Imagine having a single tool and screen to see what is happening on all of your enterprise computer systems...at a cost that won't drain your budget. eXc Software provides MOM solutions for non-Windows systems. eXc Software non-Windows MOM Management Pack (MP) monitors and automates Unix, Linux, networking equipment, NAS/SAN (i.e. storage arrays), Firewalls, power equipment, etc.

The MOM MP for non-Windows can:

- View all critical non-Windows messages in MOM
- Collect performance data for graphing within MOM
- Extend monitoring and/or performance metrics to suit specific needs
- Issue commands to non-Windows systems based on any criteria
- Generate detailed reports showing all activity on non-Windows systems for post-analysis purposes
- And much more

If you are considering utilizing the complete power of MOM by monitoring your non-Windows systems, contact your local eXc reseller.
